DBU

How can I determine how much interactive resources DBU will use?

Interactive resource utilization by DBU is difficult to determine.

It depends on factors beyond our scope (such as file size, number of logical files, number of deleted records, and whether updates or views are being performed using DBU).

DBU/GUI does not use interactive resources, DBU/GUI uses the IBM i/iSeries/AS400 typical Client/Server configuration when accessing database objects and the resources used are batch processing.
