

# SQL/Pro

## How can I view my previously executed SQL statements?

You can review the history by selecting option 5 of the Services Menu (F13). This will give you a summary listing of **SQL/PRO** statements, with each line showing the SQL statement and the date and time it was run. This display is in chronological order with the initial display showing the most recent page of statements. You can page back and forth through the statements with the roll keys.
