

General

How can I use the DBU command without adding the DBU library to my library list?

First use this command:

```
CRTDUPOBJ OBJ(DBU) FROMLIB(DBUxx) OBJTYPE(*CMD) TOLIB(QGPL)
```

Then use this command:

```
CHGCMD CMD(QGPL/DBU) *CURLIB(DBUxx)
```

NOTE: DBUxx - xx refers to the version of DBU eg. DBU10
