# SQL Audit

# How do I execute SQL Audit?

If your **system journaling is on**, the command SQLAUDMN displays the SQL Audit menu and the documentation will step you thru the product.

If you **need to capture journals** and are using **IBM’s SQL**, the STRIBMSQL command is used in place of IBM’s STRSQL. This will capture the journals required for SQL Audit menu options. Then access this information thru the SQL Audit Menu using the command SQLAUDMN.

If you **need to capture journals** and are using **ProData’s Sql/Pro**, the STRPDSQL command is used in place of STRSQL. This will capture the journals required for SQL Audit menu options. Then access this information thru the SQL Audit Menu using the command SQLAUDMN.
