

DBU

Can you move/change the key fields order without changing the field sequence numbers?

DBU does offer the ability to order by key fields however there is no function key to accomplish this. There is a setting in DBUAUT that can accomplish this.

If you execute the command DBUAUT and access the DBU User Authority Defaults (any profile not specifically defined in DBUAUT will use the *PUBLIC profile). Then use Option 1=Update on the appropriate profile and page down 2 times to the third screen, you will see a parameter for "Order by Key Fields first" near the top of the screen. Changing this to a 'Y' will accomplish what you want when you use DBU.
