

# DBU

**I would like to know the proper way to end/start the DBURDBSBS subsystem, since we are automate our backup, or they start automatically when the TCPSVR starts?? so I can add the command in our backup CL???**

You can use the following command to end the DBURDBSBS subsystem:

```
ENDSBS SBS(DBURDBSBS) OPTION(*IMMED)
```

You can use the following command to start the DBURDBSBS subsystem:

```
STRSBS SBSDB(DBU10/DBURDBSBS)
```

The subsystem will not end or restart unless you use these options. These commands can be added to your CL program.
