DBU Audit

How do I secure my DBU Audit journals?

Change the owner of the objects in library DBUAUD to QSECOFR or a level high enough to prevent unauthorized users from accessing them and *EXCLUDE all other users from the objects. Then change the owner of DBU0207 in your DBU library to the same owner as the journals. This will allow lower authorized users to use DBU and have the audit entries written to the journals. When a lower authorized user tries to use the DBUAUDMN or the DSPJRN command to access the journals, the command will fail.
