DBU Audit

How does DBU Audit help IT departments?

DBU Auditing is a great product for all companies. All IT departments manage, modify and display information in databases. Regulatory compliance and internal controls go to the heart of IT with requirements to manage & track this activity.

Combined with DBU Authority controls, which offer extensive tailoring on the access of all files and tailoring of the functionality within DBU for each user, DBU Audit features create the tracking and reporting mechanisms required for IT audits. Finally, DBU audit files can easily be protected from misuse and special security needs can be hand-tailored as needed by appropriate users.
