

SQL/Pro

How do I move my saved queries to another AS/400?

Save the physical files SQL4LSQ and SQL4LHQ from the SQL/PRO product library (i.e. PDSQL30) and restore them into the product library on the new box. The saved queries themselves have been saved in libraries of your own choosing. Each query consists of two or three objects depending on whether or not the query has a report format saved with it. These objects will have the same name as the saved query itself but with different object types. For example the saved query CUSTLIST will have 3 associated objects:

- CUSTLIST type *QMQRV
- CUSTLIST type *FILE
- CUSTLIST type *QMFORM

You will need to save these query objects from their respective library(s) and restore them into libraries of the same name on the new box.
