

General

Do you have an option for Unicode? I am trying to view DBCS data.

We can handle UCS-2 (Unicode) data.

Our development staff would like to accommodate your request. We ask that you send a sample of data that contains the DBCS type data. If you are able to provide that, please create a duplicate object of a sample of the data and then use the SAVOBJ command to save the duplicated data to a save file. Then FTP the save file to your PC and send that to us as an email attachment to help@prodatacomputer.com.

Please contact us if you need additional information in order to complete this request.
