

Install / Updates / OS

How can we update our DBU software?

To update DBU, you can do one of three things:

- download the latest version from our [download page](#)
- use the command `DBUPTF` (DBU 7.0 and later) to update to the latest release.
- download our [ISO image](#) to create an installation CD to update our software

For more information on these processes you can contact our technical support team at 800.228.6318.

Note: Be sure no one is currently using DBU when updating. Before installing - run the command: `WRKOBJLCK OBJ(DBU10/DBUUSERS) OBJTYPE(*FILE)`.
