SQL/Pro

Will SQL/Pro run in batch, or how do I select the execution environment?

You are able to run your SQL statement either interactively or in batch, depending upon how you have set it. To set the execution environment, take option 2 of the Service menu (F13). Enter a "B" for batch or "I" for interactive. The default is Interactive: each time you start **SQL/PRO**, it will begin with this setting.
